Sony Mavica Digital Camera

We recently tried out the Sony Mavica digital Camera (model MVC-FD71) and we have found it to exceed our expectations. It is the first digital camera to store pictures directly to disk to let you take pictures without running out of space. It will store between 20-40 pictures per disk, and you can use as many floppies as you like.

Here is what Julie has to say about this camera:

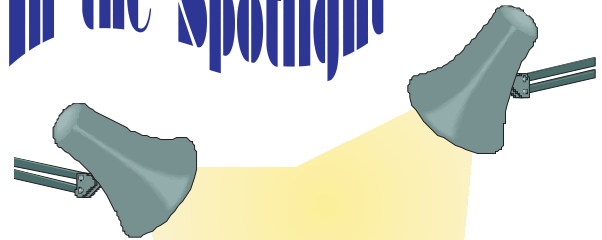

"I like how easy it is to use. There are no cables required and no special software to install. It can be used with any computer that has a floppy drive. The 10X zoom lens makes it very easy to get as close to your subjects as possible."

- 2x high speed floppy disc drive
- Removable 3.5" 2 HD Floppy storage media
- Progressive scan CCD
- 10:1 optical zoom lens with auto/manual focus
- Whole disk copy
- Quick replay and index mode
- 2.5" advanced color LCD with solar window and Brightness control

This was taken with the Mavica MVC-FD71 and printed on a DeskJet 890C

Looking for the "Perfect" Software?

Well, Chances are, you haven't found the perfect software, because it doesn't exist. Every Business runs differently, and that makes it difficult for software manufacturers to make a program to fit everyone's needs without also adding a lot of extra features that you don't need.

We can customize software for you to track anything you need.

Whether it's simply your customers' names and addresses you need to keep track of, or if you need a full scale database program to handle every aspect of your company, we can customize a software package for you.

We use Microsoft Access to create custom database systems for any business that will enable you to efficiently and easily run your office.

Call us today for your free consultation to see what we can do to help you create your custom software for your business.
