### **Anti-Virus Programs**

*If the data files of your anti-virus program are not updated on at least a monthly basis (preferably on a daily basis) you stand a chance of being bitten by a virus. Even if you are connected to the internet, all it takes to get a virus is to load a file from a customer, supplier, employee or a friend.*

*An example: We had sold a customer a copy of Norton Anti-Virus a few months back and their computer was cleaned of all viruses and was "Virus Clean". We had their PC in the shop a few months later and after the repairs, decided to check their anti-virus software. I found the virus data file was 4 months old so I updated it. Low and behold, it had 15 files that were infected with viruses from about 40 days ago.*

*Another customer bought a book with a cd-rom inside that had a virus in it. So much for commercial software being virus free...*

*So, if you don't have an anti-virus program, get one. If you do, make sure it's always up-to-date!!*

### **Fast Back up Tape Drives**

*For anyone who has had to wait for backup to complete knows that this is a long and dreary time. The new TR-5 backup tape drives are twice as fast as the earlier TR-4 drives, they also store more than twice as much data on a tape.*

*For those still running the TR-3 tape drives, it is faster yet.*

*Time to upgrade? Let us know. We will be happy to provide a proposal.*

### **Voice Mail Systems**

*Have you ever run into the situation where your receptionist was sick, or not coming in for some other reason and you had to answer the phone? Or how about not getting messages or phone numbers when someone has called? How about so many calls in at once that you miss some?*

*How would you like a receptionist who is always on time, never takes a day off and never misses any part of a message? Sound good?*

*We offer Voice Mail systems from Avaya Communication and VoiceGate. Give us a call for more details!*
